2023EC0151-S01	S-700	Spectacles

TESTS CARRIED OUT

- DETERMINATION OF SPHERICAL, ASTIGMATIC AND PRISMATIC REFRACTIVE POWERS.
- DIFFUSION OF THE LIGHT.
- EVALUATION OF THE MATERIAL QUALITY AND SURFACE.
- VARIATION OF THE LUMINOUS TRANSMITTANCE.
- INCREASED STRENGTH.
- STABILITY AT HIGH TEMPERATURE.
- RESISTANCE TO UV RADIATION.
- RESISTANCE TO IGNITION.
- RESISTANCE TO THE IMPACT TO HIGH SPEED PARTICLES.
- ASSESSMENT TEST VISUAL FIELD.
- EVALUATION OF LATERAL PROTECTION.
- VISIBLE AND ULTRAVIOLET TRANSMITTANCE.

Tests marked with * are not included within the scope of the ENAC accreditation.

REQUIREMENT SUMMARY

DETERMINATION OF SPHERICAL, ASTIGMATIC AND PRISMATIC REFRACTIVE POWERS

Requirements to assess the spherical, astigmatic and prismatic refractive powers according to the standard EN 166:2001 point 7.1.2.1.2.

OPTICAL CLASS	SPHERICAL POWER (D_1+D_2)/2 (m^{-1})	ASTIGMATIC POWER $ D_1-D_2 $ (m^{-1})	PRISMATIC POWERS IMBALANCE cm/m		
			Horizontal		Vertical
			Base out	Base in	
1	$\pm 0,06$	0,06	0,75	0,25	0,25
2	$\pm 0,12$	0,12	1,00	0,25	0,25
3	+ 0,12 - 0,25	0,25	1,00	0,25	0,25

DIFFUSION OF THE LIGHT

Requirements for the evaluation of the diffusion light for eye protectors according to standard EN 166:2001 (point 7.1.2.3).

Maximum value of reduced luminance factor according to EN 166:2001 point 7.1.2.3

Reduced luminance factor	Welding filters	Oculars for protection against high-speed particles	Other ocular
($cd / m^2 * lx$)	1,00	0,75	0,50

EVALUATION OF THE MATERIAL QUALITY AND SURFACE

Requirements for the evaluation of the quality of the material and surface of the eye protector according to standard EN 166:2001 (point 7.1.3).

Except for a 5 mm wide marginal band, the eyepieces must be free of any significant defect that may alter vision during use, such as bubbles, scratches, inclusions, spots, pitting, mold marks, threads, roughness, peeling, slits and ripples.

VARIATION OF THE LUMINOUS TRANSMITTANCE

Requirement to assess the uniformity of luminous transmittance in eye protectors according to the standard EN 166:2001 (point 7.1.2.2.3).

- The relative variations in the value of the luminous transmittance (T_V) around the road centers shall not exceed the values in the table.

- The relative deviation between the two visual centers of the right and left eyepieces should not exceed the values in the table or 20%, taking the greater value.

Luminous transmittance τ_v (%)		Admissible relative variation $\Delta\tau$ (%)
Lower than	Till	
100	17.8	± 5
17.8	0.44	± 10
0.44	0.023	± 15
0.023	0.0012	± 20
0.0012	0.000023	± 30

INCREASED ROBUSTNESS

Requirements of the test of increased strength for eye protectors according to standard EN 166:2001 (point 7.1.4.2.2)

After the test should not occur:

Fracture of the ocular	Deformation of the ocular	Fracture of the ocular rim or mount	Failure in lateral protection

STABILITY AT HIGH TEMPERATURE

Requirement to be met according to the standard EN 166:2001 point 7.1.5.1

Full protectors shall not show apparent deformation.

RESISTANCE TO UV RADIATION

Requirements for the evaluation of the diffusion light for eye protectors according to standard EN 166:2001 (point 7.1.2.3) and EN 166: 2001 (point 7.1.5.2).

Maximum value of reduced luminance factor according to EN 166:2001 point 7.1.2.3

The relative variations in the value of the luminous transmittance (τ_v) shall not exceed the values in the table.

Reduced luminance factor	Welding filters	Oculars for protection against high-speed particles	Other ocular
cd / m ² *lx	1.00	0.75	0.50

Luminous transmittance τ_V (%)		Admissible relative variation (%)
Lower than	Till	
100	17.8	±5
17.8	0.44	±10
0.44	0.023	±15
0.023	0.0012	±20
0.0012	0.000023	±30

RESISTANCE TO IGNITION

Requirement to be met according to the standard EN 166:2001 point 7.1.7.

No part of the ocular protector ignites or continues to glow after the steel rod has been removed.

RESISTANCE TO THE IMPACT TO HIGH SPEED PARTICLES

Requirements of the test of resistance against particle impacts at high speed for eye protectors according to standard EN 166:2001 (point 7.2.2).

Fracture of the ocular	Deformation of the ocular	Fracture of the ocular rim or mount	Failure in lateral protection
------------------------	---------------------------	-------------------------------------	-------------------------------

ASSESSMENT OF FIELD OF VISION

Requirements for the evaluation of the field of vision for eye-protector according to standard EN 166:2001 (point 7.1.1).

The eye protectors shall have, at least, a field of vision defined by the two ellipses of Figure 1 of the standard when placed and centred at a distance of 25 mm from the surface of the eyes of the appropriate test head. The axis Horizontal should be parallel to, and 0.7 mm below, the line connecting the centres of both eyes. The ellipses must have a horizontal width of 22.0 mm and a vertical width of 20.0 mm. The distance between centres of the two ellipses should be $d = c + 6$ mm, where c is the interpupillary distance. The interpupillary distance of the head is 64 mm and the small test head is 54 mm, if the manufacturer does not indicate otherwise.

EVALUATION OF LATERAL PROTECTION

Requirements for the evaluation of the lateral protection for eye protectors according to standard EN 166:2001 (point 7.2.8)

The lateral protection shall prevent contact between the end of the rod and the impact areas of the test head.

VISIBLE AND ULTRAVIOLET TRANSMITTANCE

Requirements for the evaluation of the visible and ultraviolet transmittance for eye protectors according to the standards EN 166:2001 (point 6) and EN 170: 2002 (point 5).

Protection class	Maximum spectral transmittance in UV $\tau(\lambda)$		Visible transmission coefficient τ_v	
	313 nm %	365 nm %	Maximum %	Minimum %
2-1.2	0.0003	10	100	74.4
2-1.4	0.0003	9	74.4	58.1
2-1.7	0.0003	7	58.1	43.2
2-2	0.0003	5	43.2	29.1
2-2.5	0.0003	3	29.1	17.8
2-3	0.0003	2	17.8	8.5
2-4	0.0003	0.8	8.5	3.2
2-5	0.0003	0.3	3.2	1.2

Additional requirements:

- For $210 \text{ nm} \leq \lambda \leq 313 \text{ nm}$, spectral transmittance shall not be greater than specified value for 313 nm;
- For $313 \text{ nm} < \lambda \leq 365 \text{ nm}$, spectral transmittance shall not be greater than specified value for 365 nm;
- For $365 \text{ nm} < \lambda \leq 405 \text{ nm}$, spectral transmittance shall not be greater than visible transmittance coefficient.

Eyepieces with enhanced color recognition (optional):

- For wavelengths between 500 nm and 650 nm, the spectral transmittance coefficient shall not be lower than $0.2 \tau_v$;
- The relative visual attenuation coefficient Q, for red, yellow, green and blue signal light shall not be lower than 0.8.

LIABILITY CLAUSES

- 1.- AITEX is liable only for the results of the methods of analysis used, as expressed in the report and referring exclusively to the materials or samples indicated in the same which are in its possession, the professional and legal liability of the Centre being limited to these. Unless otherwise stated, the samples were freely chosen and sent by the applicant.
- 2.- AITEX shall not be liable in any case of misuse of the test materials nor for undue interpretation or use of this document
- 3.- The Offer and / or Order to which the applicant gives approval through signature and seal, constitutes the Legally Executable Agreement in which AITEX is responsible for safeguarding and guaranteeing the absolute confidentiality of the management of all the information obtained or created during the performance of the contracted activities.
- 4.- In the eventuality of discrepancies between reports, a check to settle the same will be carried out in the head offices of AITEX. Also, the applicants undertake to notify AITEX of any complaint received by them as a result of the report, exempting this Centre from all liability if such is not done, the periods of conservation of the samples being taken into account.
- 5.- AITEX will provide at the request of the person concerned, the treatment of complaints procedure. In the event that you want to make it, direct it to: calidad@aitex.es.
- 6.- AITEX is not responsible for the information provided by customers, which is reflected in the Report, and may affect the validity of the results.
- 7.- AITEX is not responsible for an inadequate state of the sample received that could compromise the validity of the results, expressing such circumstance, in the test reports.
- 8.- AITEX may include in its reports, analyses, results, etc., any other evaluation which it considers necessary, even when it has not been specifically requested.
- 9.- When a Declaration of Conformity is requested, if not indicated otherwise, the decision rule according to ILAC-G8: 2009 will be applied with a security zone of 1U and a Probability of False Acceptance <2.5%.
- 10.- The uncertainties of tests, which are made explicit in the Results Report, have been estimated for a $k = 2$ (95% probability of coverage). If not informed, they are available to the client in AITEX.
11. - The original materials and rests of samples, not subject to test, will be retained in AITEX during the twelve months following the issuance of the report, so that any check or claim which, in his case, wanted to make the applicant, should be exercised within the period indicated.
- 12.- This report may only be sent or delivered by hand to the applicant or to a person duly authorised by the same.
- 13.- The results of the tests and the statement of compliance with the specification in this report refer only to the test sample as it has been analyzed / tested and not the sample / item which has taken the test sample.
- 14.- The client must attend at all times, to the dates of the realization of the tests.
- 15.- According to Resolution EA (33) 31, the test reports must include the unique identification of the sample, and any brand or label of the manufacturer may be added. It is not allowed to re-issue test reports of untested sample names (references), they can only be re-issued for error correction or inclusion of omitted data that were already available at the time of the test. The laboratory can not assume responsibility for declaring that the product with the new trade name / trademark is strictly identical to the one originally tested; This responsibility belongs to the client.
- 16.- This report may not be partially reproduced without the written approval of the issuing laboratory.
- 17.- AITEX laboratories do not carry out sampling, so that the results of the test reports are applicable to the sample as it was received.
